TITLE	List of Core Journals in Earth Sciences.
INSTITUTION	International Council for Scientific and Technical Information, Paris (France).
SPONS AGENCY	United Nations Educational, Scientific and Cultural Organization, Paris (France). General Information Programme.
REPORT NO	PGI-86/WS/25
PUB DATE	Nov 86
NOTE	393p.
PUB TYPE	Reference Materials - Directories/Catalogs (132)
EDRS PRICE	MF01 Plus Postage. PC Not Available from EDRS.
DESCRIPTORS	*Classification; *Databases; Developing Nations; *Earth Science; *Foreign Countries; Geology; Geophysics; *Indexing; Information Sources; Mineralogy; Paleontology; *Periodicals
IDENTIFIERS	UNESCO

ABSTRACT

Selection and acquisition of relevant materials for building and developing an information infrastructure are modern worldwide problems. This document provides a core listing of journals in the earth sciences in an effort to develop a tool for the improvement of information handling and transfer. The core list was generated using several databases and selections were made based on productivity, scientific impact, and interest for developing countries. The major section of this document contains the core list, which includes: (1) the title of the journal; (2) the International Standard Serial Number (ISSN); (3) the subject area(s) or theme(s) covered by the periodical; (4) the most widely employed language(s) used for the articles published in the journal; (5) the number of issues published annually; (6) the abstracting services which cover each periodical; and (7) the name and address of the publisher. The subsequent sections provide indexes to the core list by subject scope, the countries where the journals are published, language, and ISSN number. (TW)

INTRODUCTION

Role of information selection tools

Specialized information plays a fundamental role in the growth of knowledge and in the acquisition and transfer of knowledge, and is therefore essential to scientific, technological, economic and social development. But the rate at which the volume of information is growing has increased dramatically in recent years, and far exceeds the rate of growth of resources of libraries and information centers.

Selection and acquisition of relevant material for building and developing information infrastructure is thus a modern worldwide problem, which stems from the growing amount of scientific and technical literature in the world. The disparity between available resources allocated for selection and the available mass of literature from which to select is a crucial problem, particularly in developing countries, and it has therefore become of prime importance to create selection tools and to promote international cooperation in this area.

Core lists of journals in Life Sciences, Engineering and Earth Sciences have been prepared by the International Council of Scientific Unions Abstracting Board (ICSU AB) under contract to UNESCO, as a contribution to the development of tools for the improvement of information handling and transfer. This project should be seen as part of a wider effort by the international library and information community and in particular, as contributing to the overall objectives of the Programme for the Universal Availability of Publications (UAP), launched by the International Federation of Library Associations and Institutions with UNESCO support, which is concerned in the related problems such as : the sharing of resources for acquisition of books and periodicals, the organization of repositories of documents at the national or regional levels and the improvement of interlending mechanisms.

Journals are the most important part of a scientific and technical collection because they publish the immediate results of experimental research and announcements of technical progress. In a general context of growing subscription rates and shrinking budgets, the proliferation of journals makes it necessary for library and information centers to select in each discipline those which are the most relevant and the most likely to be requested by users. It is now well established that the most useful articles in a given discipline are mainly concentrated in a small nucleus of journals. In this context, the core lists of journals are aimed at guiding libraries and information services concerned with the creation, development and evaluation of document acquisition.

Identification of core journals by abstracting and indexing services

The abstracting and indexing services, as exemplified by the ICSU AB members, perform a vital function in the transfer of information between producers and users, by identifying routes for access to published literature. The first stage of this process is the input of primary information, which implies :

- acquisition, which is the process by which the appropriate segment of the world literature is chosen by an abstracting and indexing service to meet the need of its users,

- scrutiny of the source material which has been acquired and selection in accordance with the policy of the service as to the quality of this source material and its completeness.

The factors involved in screening the source material through these steps are very precisely defined for each abstracting and indexing service, and they determine the coverage of the service, i.e. the material to be processed. The decision to select a journal on the basis of its value and relevance to the field covered by the service therefore has important consequences and is taken by highly qualified staff.

The member abstracting and indexing services of ICSU AB are mostly discipline-oriented services. Since few journals are strictly discipline-oriented, coverage includes material selected at the level of individual articles contained in journals which may be only partially relevant to the discipline in question. The concept of "productivity" has been established to differentiate among the journals relevant to a given field of knowledge :

- most productive journals, relatively few in number, but responsible for a high percentage of the total literature of the field (core journals)
- other significantly productive journals (medium journals)
- less productive journals, extremely numerous but containing few articles concerning the field considered (fringe journals).

The journals included in the core lists have been selected by means of :

(i) a combination of evaluation factors aimed at determining the most relevant coverage in a given discipline,

(ii) productivity criteria by which the journals with the highest number of relevant articles are identified.

CORE LIST OF JOURNALS IN THE EARTH SCIENCES

Selection criteria

The serials included in this core list were selected from the journals covered by the international network for Earth Science documentation contributing to the GeoRef database, produced by the American Geological Institute (AGI), and the PASCAL-GEODE database, produced by the French Bureau de Recherches Géologiques et Minières (BRGM) and the Centre National de la Recherche Scientifique (CNRS). The participating countries in the network (Czechoslovakia, Finland, France, Federal Republic of Germany, Hungary, Italy, Poland, Romania, Spain, USA) selected the core journals using the following criteria :

- productivity
- scientific impact
- interest for developing countries

The list was compiled and processed by the Geological Information Department of BRGM at Orléans.

Among the titles included in the core list, a majority belong to the category of "most productive journals". They account for 70% of the total production of Earth Science literature and represent the most regularly published periodicals.

Productivity, of course, is an important factor in selecting journal titles for acquisition by information services. However, many productive primary journals in the Earth Sciences have a predominant regional aspect and therefore are of less interest to the developing countries. For areas outside their region, developing countries will usually prefer to direct their acquisition policy towards research and technology issues. This is the reason why the scientific importance of a given journal has been used as a complementary selection criterion. In particular, several monograph series and irregularly published research journals have been included on this basis.

A third criterion for selection was the specific interest of a journal for the developing countries. For example, specialized journals published in the developing countries are of utmost importance for the progress in geological research, mineral exploration or water resources in these countries. This is the reason why, independently of productivity rules, the specialized Earth Science journals published in the developing countries have been included in the core list. The list includes 393 journals from developing countries as defined by the UN system, which are enumerated on page 13.

In compiling this core list, the term "journal" has been interpreted to mean any serially issued publication which qualifies for an ISSN assignment. ISSNs have been recorded when available from the international ISSN file. On this basis, primary journals, monograph serials, translation journals and in some cases conference proceedings were included in accordance with the selection criteria. Series such as geological maps had to be excluded for this reason.

Only the most recent ISSNs and titles have been recorded. In some cases the operational activity of a journal title could not be checked, especially when the publication has been issued irregularly. In order to ensure full and fair coverage of the list, it was decided to include relevant journals of this type even if their current activity could not be definitively confirmed.

Data elements for each entry registered in the core list

- Title : The journal titles are arranged alphabetically according to the "Key Title" assigned to the journal by the International Serials Data System (ISDS). These "key titles" have been taken from the official file compiled by ISDS. If the title was unavailable from this source, a title consistent with ISDS rules was constructed and included in the core list.

  The "Key Title" is followed by the abbreviated title, as appears in the ISDS file.

- ISSN : The International Standard Serial Number (ISSN) which is the internationally recognized code assigned to all serials published has been included when available from ISDS or from the journal.

- Subject scope : The subject area(s) or theme(s) covered by each periodical in the core list are indicated under the "Subject Scope" data element of each record. No more than two subject areas have been assigned to each journal. The list of subject areas used is given on page 12.

- Language : Most widely employed language(s) used for the articles published in each core periodical. In general a maximum of three languages have been chosen from the most recent issues of the journals.

- Frequency : This data element indicates the number of issues published annually.

- Secondary coverage : The abstracting services which cover each periodical are identified using the following codes :

AAA	Astronomy and Astrophysics Abstracts
AIP	American Institute of Physics
BIO	BIOSIS
BST	GeoRef/PASCAL-GEODE network
CAS	Chemical Abstracts Service
EIX	Engineering Information
INS	INSPEC
JIC	Japan Information Center of Science and Technology

For the secondary services not directly involved in the Earth Sciences, the content of this data element has been extracted from the International Serials Catalogue published by the International Council of Scientific Unions Abstracting Board in 1978.

- Publisher : The publisher of each periodical is listed along with a mailing address.

NOTE Percentage and rank : This data element is not included in the core list of journals in the Earth Sciences. As the Earth Sciences are basically observational sciences, regional journals have a heavy impact on productivity and ranking. These regionally oriented journals are indeed important but the inclusion of productivity rank as a selection criteria would cause major journals dealing with theoretical, methodological or experimental problems to appear with a low priority order in terms of ranking, thus misleading the user in selection procedure.

Furthermore, the productivity of a journal varies from one year to another and can also depend on the selection policy applied by the information service or database producer.

GUIDE TO USING THE CORE LIST

This list of core journals includes approximately 1300 titles, of which 700 have been selected on the basis of productivity. 250 belong to the category of less-productive journals, which are nevertheless important for general research activity. Another 350 serials are specialized journals containing articles mostly descriptive in nature and regionally oriented which are essential for centers involved in regional studies.

In order to guide information centers, library or research workers in selecting the serials necessary to their work several tools have been created :

- The complete alphabetical list of core journals is a reference guide which is easy to handle when the alphabetical entry is known.

- The list of the most important core journals can be considered as the basic list for regional or national centers dealing with Earth Science information. Included in this list are approximately 150 titles :
  - The 100 most productive journals,
  - The major review journals or news magazines containing information on international research activity, organizations, publications, meetings, etc.
  - A complement of research journals in specific fields selected for their quality.

  The list has been arranged alphabetically. The limited number of journals combined with their widely known scientific reputation, makes consultation of this list an easy task.

- Subject index : Specialized libraries and information centers will find in this index the journals available in their field. Attention should be given to the fields "Regional Geology" and "Miscellaneous" which contain journals covering subjects of regional interest or several subject areas, but which might also be selected by a given center for their specific coverage (for example, publications of a geological survey of a country which lies essentially on crystalline rocks).

- Geographical index : Specifically introduced for the Earth Sciences journals, this index provides access to the periodicals by country of publication. It is of utmost importance to specialists working in a regional context and can be a guide for selection of serials for any national or regional information center for either information or document delivery purposes.

- Language index : Especially useful for centers where selection or elimination of journals is based upon language criteria. Attention should be given to the fact that, in some cases, few articles are published in the second or third language registered. Actually, the country of publication may help to indicate the relative importance of the languages employed.

- ISSN to full title index : ISSNs are arranged in increasing order of numbering. Titles without ISSN are listed at the beginning of the index.

COSTS

The budget necessary for the acquisition of a subset of the core list varies with the objectives of the information service involved. For the Earth Sciences, subscription rates for the individual serials have not been given. The variations and changes in subscription rates are numerous because they are based upon many parameters (membership, exchange rate variations, currency, inflation rates, country of acquisition, categories of readership, etc.).

However, in order to estimate the cost of acquisition of the Earth Science journals it should be noted that the average annual subscription rate for an Earth Science serial (for the 1984 volumes issued by the commercial publishers) is approximately U.S. $ 90.

PRINTED EARTH SCIENCE BIBLIOGRAPHIES

The international bibliographies distributed by the major secondary services have not been included in the core list. They can be purchased from the following information centers :

- GEODE-PASCAL-S : Bibliography covering the world literature in the Earth Sciences selected from the PASCAL-GEODE database. The individual sections can be purchased separately. Copublication of Bureau de Recherches Géologiques et Minières and Centre National de la Recherche Scientifique. Information on subscriptions from :

  CDST du CNRS
  26 rue Boyer
  75971 Paris Cedex 20
  France

- Bibliography and Index of Geology covering the Earth Sciences as a whole. Extracted from the GeoRef database.
  Publisher : American Geological Institute
  4220 King Street
  Alexandria, VA 22302
  USA

- Geotitles Weekly covering the Earth Sciences as a whole. Extracted from the GeoArchives database.
  Publisher : Geosystems
  P.O. Box 1024
  Westminster, London SW1P 2JL
  UK

- Referativnyi Zhurnal : The geology and geophysics sections apply to the Earth Sciences.
  Publisher : VINITI
  Baltyskaya ul 14
  125219, Moscow A 219
  USSR

- Various field or region-oriented serially published bibliographies are available (covering, for example, Mineralogy, Rock Mechanics, Engineering Geology, the Middle East or Africa).

* The International Council for Scientific and Technical Information (ICSTI) was established in June 1984 as the successor to ICSU AB. Like its predecessor, ICSTI is an international, non-governmental, not-for-profit organization. Its purposes are to increase accessibility to, and awareness of scientific and technical information, and to foster communication and interaction among all participants in the information transfer chain.

SUBJECT HEADINGS OF THE CORE LIST

Applied Geophysics (applied to Solid Earth Geophysics) and Exploration
Crystalline Rocks (including Volcanology)
Economic Geology (Mineral Exploration, Metallogeny)
Engineering Geology (including Environmental Geology, Rock and Soil Mechanics)
Extraterrestrial Geology
Geochemistry
Hydrology
Isotopic Geochemistry (including Dating)
Marine Geology
Mineral Economics (including Mining)
Mineralogy
Miscellaneous (mostly covering several subject fields)
Multidisciplinary journals
Paleontology
Regional Geology
Sedimentary Rocks
Solid Earth Geophysics
Stratigraphy
Structural Geology
Surficial Geology (including Soil Sciences, Geomorphology, Quaternary Geology)

JOURNALS FROM DEVELOPING COUNTRIES* IN THE CORE LIST

COUNTRIES	NUMBER OF JOURNALS	COUNTRIES	NUMBER OF JOURNALS
Albania	3	Ivory Coast	1
Algeria	3	Jamaica	4
Argentina	16	Kenya	2
Bolivia	4	Korea, Republic of	6

0567-7394 : Acta Crystallographica. Section A. Crystal Physics Diffraction, Theoretical and General Crystallography
0567-7408 : Acta Crystallographica. Section B. Structural Crystallography and Crystal Chemistry
0567-7491 : Acta Geologica et Geographica Universitatis Comenianae Geologica
0567-7505 : Acta Geologica Hispanica
0567-7513 : Acta Geologica Lilloana
0567-7920 : Acta Palaeontologica Polonica
0568-658X : Trudy Instituta Geologii Geofiziki (Novosibirsk)
0568-7365 : Journal of the Mining College, Akita University, Series A : Mining Geology
0570-1619 : Annales de Paléontologie . Invertébrés
0574-7236 : Boletim da Universidade Federal do Parana. Geodesia
0574-8259 : Memoir - Cyprus Geological Survey Department
0574-8267 : Annual Report - Geological Survey Department (Nicosia)
0578-1825 : Chung-Kuo ti Ch'ih Hsueh Hui Chuan Kan
0579-6733 : Mémoires - Association Internationale des Hydrogéologues
0579-9406 : Vestnik Moskovskogo Universiteta, Serija 4 : Geologia
0581-8621 : Mineral Resources Bulletin
0581-9172 : Sbornik Geologickych Ved, Geologie
0581-9180 : Sbornik Geologickych Ved, Loziskova Geologie, Mineralogie
0582-1630 : Beitraege zur Geologie der Schweiz, Geotechnische Serie
0582-2300 : Sciences de la Terre, Mémoires
0582-9747 : Journal of the University of Sheffield Geological Society
0583-1822 : Trudy Sibirskogo Nauchno-Issledovatel'skogo Instituta Geologii, Geofiziki i Mineral'nogo Syr'ja
0583-7510 : Boletin de la Real Sociedad Espanola de Historia Natural, Seccion Geologica
0583-7731 : Boletin de la Sociedad Venezolana de Espeleologia
0583-7804 : Boletim da Sociedade Brasileira de Geologia
0585-3532 : Stockholm Contributions in Geology
0587-5404 : Argumenta Palaeobotanica
0588-8700 : Notes et Mémoires - Compagnie Française des Pétroles
0702-035X : Travaux sur le terrain - Direction de la Géologie (Québec)
0703-1130 : Memoirs - Canadian Society of Petroleum Geologists
0703-8992 : Canadian Journal of Remote Sensing
0704-2752 : Ontario Geological Survey Miscellaneous Paper
0704-576X : Syllogeus - National Museum of Natural Sciences
0705-3797 : Episodes
0705-7199 : Géographie Physique et Quaternaire
0722-4397 : ZKG.International
0722-9054 : Mitteilungen - Institut fuer Grundbau, Bodenmechanik und Energiewasserbau, Universitat Hannover
0730-3130 : Marine Technology (Washington, DC)
0731-7247 : Journal of African Earth Sciences
0750-6236 : Travaux des Laboratoires des Sciences de la Terre, Série C
0750-7488 : Paléobiologie Continentale
0770-2108 : Mededelingen - Rijks Geologische Dienst
